

## **What is the digging and installation of optic lines in the Town of Watertown?**

**Fiber Optic lines are being laid by Spectrum.**

**This will allow for better Internet Service which will include better email service etc.**

**They are working from “north” to “south”. Sheilds and Emmet are beginning to get the actual fiber installed in the piping that has been laid.**

**When observing that further work is being done such as installing the actual lines and it is questionable if the line will be beneficial for your property, it is suggested to contact Spectrum and speak with a representative.**
